METPET/HOLO METPET/ ZINC PET
- PRINTING LAYER
BOPP/PET

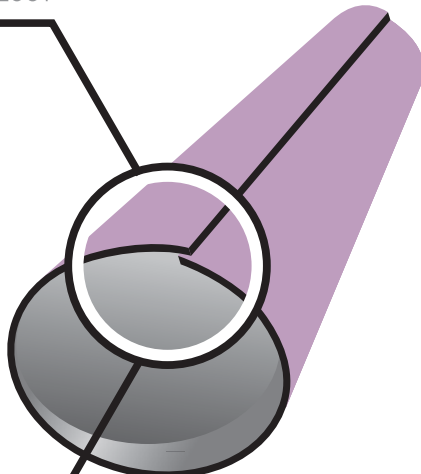

BARRIER
REINFORCEMENT
STRIP

0.3-0.5mm

DECOSEAM
TECHNOLOGY

- HIGH BURST STRENGTH
- HIGH BOUNCE BACK
- IMPROVED STIFFNESS

how we do it

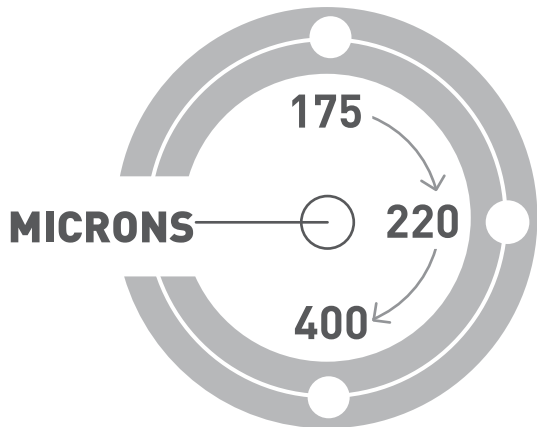

Our In house Research & Development team works very closely with the brand heads to innovate concepts which can be tailor made to suit individual needs. We integrate technology to enhance aesthetic and functionality of the product. The edge over printing technology with **8 color reverse gravure printing, HD images (covering full surface) and decorative effects on tubes** gives distinctive appeal to the product and attracts the attention of cutomers at **"Point of Sale"**. For consumers its about the functional and visual experience of the product which helps the buying behaviour patterns on the retail counters.

Our Experties in offering multiple options of laminates and films is an added advantage. We have the capabilities to play and explore combination with alternate barrier layers and barrier strips on the side seams, without obstructing the products integrity which no one has done by far.

Its our key resposnsibility to innovate and integrate latest technology in the products. The anticounterfeit feautres with advance security options like single lens (fresnel), multiple lenses, security strip and customized holographic security options are value added features to safeguard the brand image.
